

STAFFALERTER

Integrated and Affordable Emergency Detection, Alerting and Response for Schools

The goal of providing continuously managed and safe school environments to protect lives has never been more urgent. StaffAlerter is a highly scalable Cloud-based solution that lowers the purchase and maintenance costs of an emergency notification system by eliminating the need for on-premises servers, software and wiring. StaffAlerter allows you to easily and securely customize a system to meet your school's specific needs. StaffAlerter has a low entry cost and qualifies for numerous safety grants.

StaffAlerter supports virtually unlimited monitoring and alerting devices over an unrestricted geographical area to provide a single point of control for individual schools and entire districts. It can provide protection with personal alerting devices including wearables, stationary and public facing call stations, as well as most digital sensors and systems. Devices can be easily configured to activate a wide range of audio and visual responses in common and public areas, as well as providing custom responses to alerts and lockdowns. Any source of input can produce dynamic notification and control. An optional 24-hour monitoring service can alert your staff or emergency services directly.

A Better Approach to School Safety and Management

StaffAlerter allows you to send important communications to staff, students and parents about security threats, weather issues, facility closures, and changes to routines, like transportation schedules.

StaffAlerter can also receive information from a vast array of devices that inform you when a door has been propped open, when a vape detector has sensed something burning or a fight taking place, or when a school refrigerator has gotten too warm, to name a few of the events that it can track and then notify specific responders based on the problem.

The important thing to remember is that with StaffAlerter you get to build the system that you want and that you can add to it with a wide variety of devices incrementally. StaffAlerter can also integrate with existing monitoring systems to expand the reach and reporting capabilities of these systems.

STAFFALERTER

Designed to improve security, safety and prevent losses by enabling:

- Fixed and portable panic buttons
- Automatic activation of event-based SMS text messaging, emails, and phone messages to responders
- Activate the locking of doors
- Notification that a non-lethal defense system has been activated
- Monitoring of multi-event sensors that can determine when smoking or vaping has been detected, when loud voices can be indicative of a fight or bullying in progress, or when a shot has been fired
- Notify groups of weather threats
- Send out desktop, visual and audio alerts to notify of a lockdown or other emergency condition
- Activate an event management conference call
- And much more!

StaffAlerter Integrates With More Devices Than Any Other Product Available

Following are some of the devices and capabilities that schools are leveraging today, utilizing StaffAlerter to provide management and control over various safety threats and challenges. In all cases, customized notification and response events are developed by the school to ensure specific needs are met.

Vape heads are being deployed for monitoring vaping, but are also capable of detecting loud noises indicating fights or breaking glass, among other monitoring capabilities.

StaffAlerter can incorporate inputs from fixed and wireless PADs (Personal Alerting Device), NOAA Weather alerts, access control integration, and Web Buttons on PC's and mobile devices and push button relays to initiate notifications or events.

To prevent doors from being propped open, a wireless or wired PropStop device notifies users via Text SMS, Calls, Email or Push notifications which provide information on the specific door location and status. Customizable time values can be set to determine what period a door is left open before the system determines a "propped open" condition exists.

Threat Extinguisher provides a tool to protect staff in the event of a physical altercation where the element of danger is high. Threat Extinguisher uses a pepper gel spray up to 30 feet from the device to de-escalate situations. Integrated into the StaffAlerter system, when the Threat Extinguisher is removed from its carrier, an alert is sent to the StaffAlerter and the appropriate alerts, notifications and responses are set in motion.

Loud areas can be supported with SA-Alert, featuring either a 110db piezo horn or the new 112db Air Horn to cut through barriers with a distinct sound. SA-Alert provides audio and visual cues when standard paging solutions are not effective. SA-ALERT is a perfect solution for hallways, band areas, gymnasiums, shops and outside venues. The dual frequency tone of the alarm and the volume of the horn will be heard over very large areas whether indoors or outside.

Remote buildings can be supported with additional satellite processors (Contact Notifier) that communicate with the StaffAlerter main system.

The SA-SOLAR Power System provides direct 12V power and standby power backup for the SA-StaffAlerter and its SA-Alert, Contact Notifier and Wi-Fi and Cellular systems. SA-SOLAR has been used to power video cameras in areas where local power is not readily available and to power PropStop units installed on outside doors.

The optional SA-Inform application extends alerting to cell phone communications inside and outside the facility and also provides screen alerts for PC's. Alerts, custom status messages and a panic button with geolocation feature are included.

The StaffAlerter Operations Center, SA-EOC, shares content from security monitoring systems, document and database systems via simple screen sharing. SA-EOC can be easily integrated with any emergency alert system via a single URL. Upon receipt of a meeting URL from StaffAlerter, key personnel and first responders can quickly join a video and audio conference in seconds using mobile devices and computers, independent of their location.

Consider StaffAlerter before Acquiring or Renewing a Safety System

- Ease of deployment
- Lower acquisition cost
- Lower ongoing costs
- No impact to existing infrastructure
- Ease of maintenance
- Application features and flexibility
- Number of alerting devices supported
- Ease of programming and provisioning
- Ease of expansion
- Ease of integration

StaffAlerter is the right solution, for one school, a campus or a district.

Call today for a demonstration of StaffAlerter's capabilities. We can design a system that's right for your school based on best practices.

We can also refer you to third party consultants who can help you prepare a proposal for grants to fund the acquisition and deployment, for your new system.

Nothing stands in the way of making your school safer now with StaffAlerter, the best school emergency notification and response technology on the market.
